

## **Mix Class**

Audio Mixing Course for Beginners

1 on 1 instruction only

6 Weeks Long, 1 class per week ( 3 hours per class / Class # 6 is a 4 hour class )

Cost \$975

Our audio mixing course has been by far our most popular course. This course is designed for people who want to develop their abilities as a mixing engineer. In our one on one class, students will gain hands-on experience learning the process of taking recorded tracks and blending them into a finished product using various tools and techniques.

What makes our program different?

Many courses are spent online or in a class room. In our program, students are learning in an actual recording studio, a very popular recording studio that is utilized by local and national recording artists as well as film and television companies. Most “recording school” programs cost 3 times the amount of money and are over-crowded with students. Our one-on-one class allows for a low stress environment and gives the instructor opportunity to personalize conversations and assignments.

## **6-Week Course Syllabus**

### **Week 1 - Set up and Workflow**

Learn how to set up Pro Tools for mixing

Organizing your session for mixing

Understanding how to use reference mixes

Understanding Gain staging

### **Week 2 - Equalization and compression**
